Indicates Reception of Infra-Red
from Remote Keyfobs

Tests New 868 MHz BMW and
Audi RF Keyfobs

Battery Powered

Magnetic - Sticks to Tool Boxes

Low Battery Warning

Designed, Manufactured and Supported by
SP Diagnostics in the UK

The SP Diagnostics keyfob tester is an invaluable tool which allows quick and reliable testing of remote keyfobs for most vehicles on the market today. The 433MHz and 868MHz, plus Infra-Red detection give reliable and accurate indication of reception of the correct frequency. The SP Diagnostics Key Tester detects specifically these ranges so that any background noise from mobile phones and strip lights do not give false readings. A low battery indication light lets you know when the tester requires a new battery, to stop false readings costing you time and money.
