Simple Push Button Operation

Handheld

Petrol and Diesel Vehicles

Tests VAG EPB Calliper Functions

Clears Mercedes SBC Errors

Supports ISO and CAN Protocols

Retracts Callipers for Brake Replacement

**Designed, Manufactured and Supported by
SP Diagnostics in the UK**

The new Multi Electronic Park Brake Service Tool has been designed to allow the service and maintenance of brake systems on Audi, Volkswagen, Skoda, Seat & Mercedes vehicles where electronic brake systems are fitted. Having a safe environment is very important when working with such systems, the tool can deactivate Mercedes SBC, avoiding injury as the system can run checks when active. Callipers can be retracted to allow access when changing pads & disks or performing other brake related repairs. The Multi EPB tool can also configure pad thickness on supported VAG vehicles and calibrate auto hold systems. The tool can also clear codes on the Mercedes SBC system after work has been carried out.
